

Orion: all 13 frozen methods on the same primary cohort

232 tasks / 144 target-gene clusters; history-supported coverage 232 / 2,993 eligible TEST tasks (7.8%).

Dots: saved point estimates. Bars: nominal 95% gene-cluster bootstrap intervals (5,000 shared draws), conditional on fixed fits.
Frozen method order retained. Individual-method intervals are not pairwise superiority tests; no method is promoted as a winner.
