

Orion: four prespecified paired contrasts

Same 232 tasks / 144 target-gene clusters; primary cohort covers 232 / 2,993 eligible TEST tasks.

Nominal paired 95% intervals; 5,000 shared gene-cluster draws, conditional on fixed fits. Dashed line: +0.005 practical point margin.

Primary does not pass. The support contrast passes its registered checks, but cannot establish increment beyond strong history rules.

Manual and Public intervals include zero; neither replaces the primary contrast.
